### **OBSERVATIONS**

Consistent diversion over the first 9 months of the program

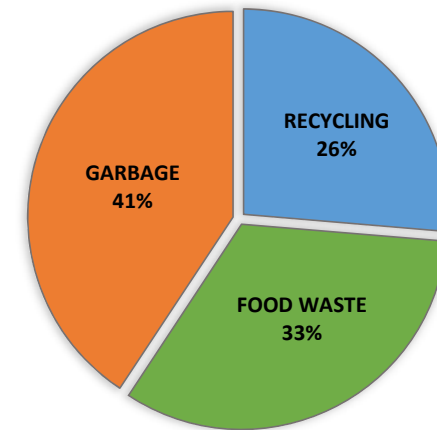

Q1 weights are lower by 39 tonnes or 6% compared to the 2019 quarterly average (July-Dec)

Food waste formed the bulk of this decline at 28 tonnes or 12% (possibly a seasonal variance)

Garbage weights stayed consistent. Further reduction efforts are required.

\***DIVERSION RATE** indicates the percentage of waste collected that does not go into the Salmon Arm landfill but is rather composted or recycled. The higher this rate the longer the lifespan of the landfill and lower cost to taxpayers by delaying or avoiding the need to site and build additional landfill space.
